

"ALWAYS-ON" ENDPOINT DEFENSE

Detect and stop threats to critical business assets.

HIGHLIGHTS

- Detect and remediate threats early in the threat lifecycle
- Strengthen the protection of critical assets
- Gain the expertise and coverage of a 24x7 SOC
- Remove the cost and complexity of solution deployment and management
- Focus on your running your business

Cyber criminals seek the easiest path to a pay day, often targeting small and medium-sized organizations with highvalue assets—but with limited security defenses. It's critical to continuously monitor your endpoints for detection of suspicious activity and have the means to automatically initiate response and containment measures.

THE CHALLENGE

Hackers are skilled at bypassing traditional perimeter and antivirus defenses on their way to vulnerable endpoints. Once a beachhead is established, they begin their lateral movement tactics towards crown jewel assets. Unfortunately, their malicious intent too often appears as 'normal' user activity, rendering organizations with limited detection tools, monitoring and the expertise to discern a real threat from 'white noise' at risk of a data breach—or becoming the next ransomware hostage.

THE SOLUTION

Limited defense in depth? We've got you covered. Limited security expertise? We can help with that! Our "always-on" endpoint defense delivers enterprise-grade threat detection, incident response, remediation and the benefits of a dedicated 24x7 Security Operations Center (SOC), so you can focus on what you do best, running your business. As a managed endpoint detection and response service, your environment is continuously monitored for thousands of virus and malware variants including multi-variant ransomware attacks and the latest cryptomining infiltrations. Designed to rapidly identify the root cause of a threat and diagnose related corrupt source processes and system settings—when malicious behavior is detected, immediate response and remediation measures are initiated on the endpoint including disconnect, quarantine or roll back to an acceptable no-risk state. Threats are contained before they can do harm, and you stay operational. For best in-class security solutions contact.

KEY BENEFITS

24x7 Endpoint Monitoring by Expert Staff

You gain the power of 24x7 monitoring of your environment without the staffing costs and expertise required of a dedicated SOC. We chase down the real threats from the noise, creating a force multiplier for your IT team who are now free to focus on your IT operations.

Simple and Cost Effective Deployment — "Always-On" Threat Coverage

As a managed service, we remove the costs and complexity of deployment and ongoing management associated with enterprise software. You gain the output of "always-on" endpoint detection and response for the protection of your most critical assets, no matter, where your endpoints are deployed, be it office, home, airport or hotel.

Next-Gen Threat Detection and Remediation

Leveraging patented threat identification and remediation technology, your desktops and servers are fully protected across multiple environments for the broadest range of coverage, including Windows, Mac and Linux, as well as virtualized servers in AWS, VMWare, Citrix, VirtualBox and Hyper-V.
